Adam Flakus

**Abstract.** A replacement name *Obscuropilaca* for the illegitimate genus *Phaeopilaca* is introduced. The three known species are transferred as *Obscuropilaca camptidia*, *O. ochrolechioides*, and *O. tortuca*.

**Key words:** *Caloplacoideae*, *Chrysophyceae*, Golden Algae

## Introduction

We recently introduced the name *Phaeopilaca* Søchting et al., as a new genus in *Teloschistaceae* (Bungartz et al. 2020). At the time of publication, we were not aware that Chodat et al. (1926) had first proposed an identical name for a genus of freshwater algae in the *Chrysophyceae* Pascher. The International Code of Nomenclature for algae, fungi, and plants (Turland et al. 2018) applies both to fungi and algae. The name of each taxonomic group governed by the code has to be unique. Therefore, the name *Phaeopilaca* is an illegitimate later homonym of Chodat's name.

To remedy the situation, we introduce *Obscuropilaca* as a replacement name here.

*Obscuropilaca* Søchting, Arup & Bungartz, nom. nov.

Mycobank MB 841162

Replaced name: *Phaeopilaca* Søchting, Arup & Bungartz, *Plant and Fungal Systematics* 65: 546. 2020, nom. illegit. [ICN (Shenzhen) Art. 53.1].

*Non Phaeopilaca* Chodat, *Bulletin de la Société Botanique de Genève, sér. 2*, 17: 210. 1926.

Type: *Obscuropilaca camptidia* (Tuck.) Søchting et al. (syn. *Lecanora camptidia* Tuck.).

Etymology: This replacement name is a combination of the syllables ‘-pilaca’ hinting at *Caloplaca* (from which species in the genus were transferred), and the Latin ‘-obscurus’ meaning ‘dark’, referring to the overall dull color of thallus and apothecia, both lacking the typically bright anthraquinones of most other members of the *Teloschistaceae*.

The following three species were previously included in the genus and are all transferred here into *Obscuropilaca*.

### Acknowledgements

We are indebted to James K. Mitchell at Harvard University for notifying us that the name *Phaeopilaca* had previously been published by Chodat, alerting us to the necessity to propose a replacement name. We also appreciate the support of Konstanze Bensch, Mycobank, in providing guidance to register *Obscuropilaca* as a replacement name. Robert Lücking and an anonymous reviewer provided constructive criticism how to improve this short manuscript, which we greatly appreciate. And we are indebted to Adam Flakus and Jolanta Miadlikowska, editors of this journal, for facilitating this publication as a short communication. This publication is contribution number 2416 of the Charles Darwin Foundation for the Galapagos Islands.
